

Alim's Study Assistant

User guide for Swiss Gymnasium exam preparation

Edition: September 2026

Language: English (en-CH)

Format: A4

This guide describes what the app does today and clearly marks features that are planned but not yet enforced by the local AI backend.

1. Welcome

Alim's Study Assistant is a study companion for a Swiss Gymnasium student preparing for the Matura. It brings your subjects, grades, study material, timetable and an AI study chat together in one calm place.

The app is organised around Home, School, Planner, Assistant, Statistics, Help and Feedback. Everything you save belongs only to you and is stored under your own account.

How to read this guide

- Sections marked **available now** describe what you can use today.
- Sections marked **planned** describe work that is already prepared in the app and in your account settings, but that the local AI backend does not yet enforce.
- Screen names are written exactly as they appear in the navigation.

No technical knowledge is required. If a step does not match what you see, check the troubleshooting chapter near the end.

2. Signing in and your account

The first screen you see is the welcome screen. From there you can create an account or sign in. You sign in with your email address or your username, together with your password.

Creating an account

- Choose a username; usernames are stored in lower case and must be unique.
- If the name is already taken, the app tells you immediately and asks for another one.
- Enter your email address and a password you do not use anywhere else.

Signing in and out

Once signed in, the app takes you to Home. To sign out, open the round profile button at the top right of the header and choose Sign out. This ends your session on this device only; your data stays safe in your account.

There is no demo or example-content option. A new account always starts empty, and everything shown anywhere in the app comes only from what you and your account have created.

3. Finding your way around

The header appears on every screen: the app logo on the left, the main navigation in the middle, and your tools on the right.

The app logo in the header always brings you back to Home, from any screen, at any time.

The header, left to right

- Logo: returns to Home.
- Navigation: Home, School, Planner, Assistant, Statistics, Help, Feedback.
- Clock: shows the current local time in 24-hour format.
- Flag button: opens the language menu.
- Round profile button: opens Profile, Settings, and Sign out.

4. Language, date and time

The flag button opens a menu with seven interface languages: English, Hochdeutsch, Schwiizerdütsch, Русский, Español, Français and Italiano. Hochdeutsch and Schwiizerdütsch are two separate entries with their own wording.

Choosing a flag switches the whole interface instantly, with no page reload. Your choice is saved to your account, so the same language greets you next time, on any device.

Date and time formats

- Dates are shown as dd/mm/yyyy, for example 14/09/2026.
- When a weekday is shown next to a date, it is written in the selected interface language, for example "Monday, 14/09/2026".
- Times are shown in 24-hour format HH:mm, for example 08:30 or 18:05.
There is no am/pm display anywhere in the app.

5. Home, School and study material

Home is your starting point. It shows a short overview of upcoming Planner entries, recent activity in your subjects, and quick links to the areas you use most.

School lists every subject you follow, each with its current average and recent assessments. Opening a subject shows its own workspace with assessments, links to its study chat, and its study material.

Study material

- Each subject has a material area for the documents you actually study from: notes, syllabus, past papers and reference sheets.
- Uploaded study material is kept normally; it is not subject to any automatic deletion.
- Material is private to your account; nobody else can list or open it.

6. Planner and Google Calendar

The Planner shows your study schedule, deadlines and exam dates in a calendar view. You can add, edit and remove entries you created yourself.

The Google Calendar link

You can connect a Google Calendar as a read-only source. Its entries appear next to your own, but they can never be edited or deleted inside the app.

To change or remove an entry that came from Google Calendar, make the change in Google Calendar itself; the Planner reflects it automatically on the next refresh.

7. The Assistant and reply language

The Assistant is a chat with an AI study helper that can explain topics, quiz you and help plan your revision.

Which language it answers in

- By default, the Assistant answers in your current app language.
- If your message is clearly written in another one of the seven supported languages, that language should win for the reply.
- This rule is prepared in the interface and saved as part of your account settings.

Planned: the local AI backend that actually generates replies does not yet enforce this language rule. The setting is stored and ready today, but the study engine running on the local machine may not always follow it yet.

This will be enforced in a future update.

8. Listening to answers

Assistant replies can be read aloud using your browser's own built-in speech feature, without any extra download.

- Press Listen on a reply to have it read aloud.
- Press Stop at any time to interrupt playback immediately.
- Audio is on by default; automatic playback of new replies is off by default. Both can be changed in the audio settings.

Nothing about the playback itself is stored; only your on/off preferences are saved.

9. Grades and statistics

Statistics shows your grades and progress on the Swiss 1 to 6 scale, where 6 is the best grade and 1 is the weakest.

4.0 is the pass mark. Grades of 4.0 or above count as a pass; grades below 4.0 count as insufficient.

Charts show your average per subject and over time, so you can quickly see where more revision is needed.

10. Assistant-produced media

When the Assistant produces an image, audio clip or video for you, that file is temporary.

- Assistant-produced media becomes eligible for deletion 30 minutes after it is created.
- After that, a short text descriptor of what was produced is kept, so you can find and recreate it later even after the file itself is gone.
- This never affects your own study uploads: files you upload yourself are kept normally and are never subject to this thirty-minute rule.

Planned: the local AI backend does not yet create these text descriptors automatically. This is prepared work for a future update; today only the timing rule for temporary media itself is in place.

11. Profile, settings, feedback and privacy

Your Profile shows your account details and lets you change your username, email address and password.

Settings brings together your language, audio preferences and other options in one place.

Feedback

Use the Feedback screen to report a problem or suggest an improvement.

Privacy

Activity logs used for troubleshooting never contain the content of your messages or any other personal text. Only technical information without content is recorded.

12. Troubleshooting and quick reference

Troubleshooting

- Language did not change everywhere: refresh the page once; your saved language is reapplied automatically.
- A Google Calendar entry looks wrong: edit it in Google Calendar, not in the app; the Planner only mirrors it.
- Listen produces no sound: check that audio is enabled in your settings and that your browser allows audio playback.
- Cannot sign in: double-check your email/username and password, and use the password reset link if needed.

Quick reference

- Date: dd/mm/yyyy, for example 14/09/2026
- Time: 24-hour format, HH:mm, for example 18:05
- Grade scale: 1-6, pass mark 4.0
- Languages: English, Hochdeutsch, Schwiizerdütsch, Русский, Español, Français, Italiano
- Google Calendar entries in Planner: read-only
- Assistant media: temporary, deletable after 30 minutes, descriptor kept
